

My Incredible Creature

The Parkland at Tatton Park is home to lots of fascinating creatures, including deer, bats, foxes, and birds - such as Kingfishers and Swallows. Visitors exploring the grounds can enjoy seeing them in their natural habitats.

Activity: Have a go at inventing your own Incredible Creature in the space below. Describe it briefly in words, and draw a picture. Here are some points you might like to think about. Don't forget to tell us your creature's name!

- Where does it live?
- How big is it?
- How much does it weigh?
- Does it have legs—if so, how many?
- Does it have scales, fur, feathers or skin?
- How does it move?
- What does it eat?
- If it hunts, how does it catch prey?
- Is it nocturnal (active at night)? or diurnal (active during the day)?
- Is it sociable? Does it live in a group or on its own?
- How does it communicate?
- How does it defend itself?
- What is its strongest sense (sight, smell, hearing etc)?

We would love to see your Incredible Creature! Draw us a picture, add a brief description, and have a chance of winning a free nature walk in the Parkland. Send your drawings to tattoneducation@cheshireeast.gov.uk with your name and age.
