

SUMMER SCAVENGER HUNT

While walking in the Parkland,
see if you can collect the following:

3 different types of leaves...

Something that you think is pretty...

Something that smells good...

A crooked stick...

A piece of bark...

Something that tickles...

Something shiny...

Something that is good to build a nest...

Something smooth...

A bug that crawls...

In Summer the Parkland flourishes with wildlife and activity. The trees are in full leaf, flowers are blooming and animals are busy searching for food and looking after their young.

You may be lucky enough to see some beautiful butterfly varieties dancing around the Parkland, including Brimstone, Orange Tip and Tortoiseshell. Use the pictures below to spot them and have a go at colouring in your own butterfly.

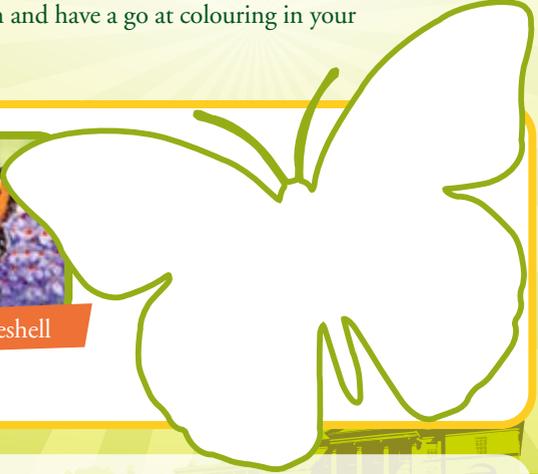

Brimstone

Tortoiseshell

Orange tip

In the Parkland there are lots of trees. Did you know that a single tree can be home to more than 200 insects? *Find your favourite tree and see how many insects you can spot living in it – record the number in the box.* Remember to look in any cracks that appear in the bark and amongst the leaf litter on the ground under the tree. ▶▶▶

Now make a bark rubbing of your tree by placing the paper over the bark and gently scribbling inside the box. ▶▶
